

Plone is well-behaved

Plone is standards-based and extensible right to the core to make it easier to integrate with existing systems and make your content as accessible as possible. Plone is compliant with W3C XHTML, CSS and JavaScript standards. Additionally, Plone is the only open-source CMS to support WAI-AA, Section 508 government standards and many other best practices for accessibility out of the box. Modular functionality and strong XML and web services support makes it easy to integrate LDAP, SQL and other external data sources with your website.

Plone is friendly and helpful

Empower end users with a system that is easy for non-technical people to understand. Plone makes innovative use of best practice design concepts to reduce the learning curve and make content management a pleasurable experience.

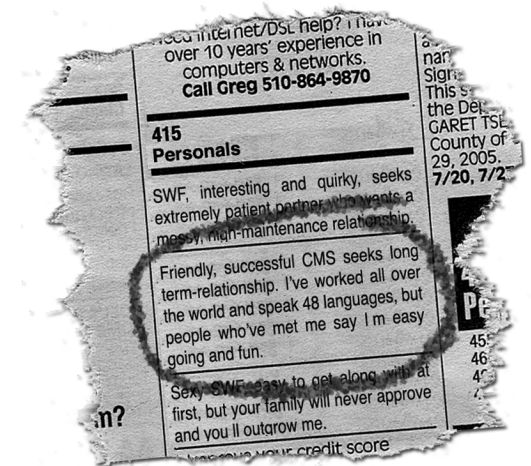

Plone is also well-documented for administrators and developers with several published books, extensive online resources, and a helpful community.

Eliminate web content management hassles with a system that is easy to use both for administrators as well as end users.

The Open Source Content Management System you can take home to management

Finally, a perfect match...

Plone is the open source (GPL) content management system that you'll be glad you found and proud to introduce. Its rich feature set will make you more productive right from the start and its robust architecture will keep supporting you through complex applications and large scale deployments.

Soon, you'll find yourself falling in love with Plone and ready for a long-term relationship. Plone has a track record of successful deployments and a strong community of developers, vendors and service providers to ensure you'll live happily ever after.

Plone loves to travel

Plone's internationalization support is more than skin deep. The world-wide development community has made Plone a robust platform with support for 48 languages out of the box, right-to-left text, and mapping relationships between documents in alternate languages.

Plone is successful in business

Businesses, governments, and educational institutions are turning to Plone because of its successful track record of enterprise class deployments.

Lufthansa uses Plone for its vendor extranets, while Motorola uses it internally. For Oxfam International, Plone helped the organization continue to accept donations after the Tsunami disaster, gracefully handling 100 times the expected site traffic. Plone co-ordinates complex curricula between thousands of faculty and students at UNC Medical School, while at Rice University it was chosen for their Connexions project fostering creation and dissemination of educational materials.

Plone is a proven solution used throughout the world in fields just like yours.

Plone is Industrious

Whether building websites for small businesses or a worldwide enterprise, Plone can scale to meet your needs. Plone is designed to work well in diverse software environments and with multiple operating systems, web server software, and user authentication methods. Best of all, Plone can work with your existing hardware and doesn't require dedicated servers to get started.

Plone's content management software is sophisticated and is easily customized to your unique environment. This includes complex document workflow, security and roles-based permissions, and configurable content types.

Be productive immediately with a tool that compliments your unique environment.

Plone is Attractive

Plone's attractive user-interface has a look-and-feel which is completely customizable. A hand-crafted, intelligent stylesheet framework provides user-interface widgets and advanced typographic control over the presentation of every component on the page.

Standards compliance and cross-platform, multi-browser support means that Plone remains attractive even after a long hot day on the web.

Plone is Passionate

The Plone product isn't just great software, it is a labor of love by a community that seeks to produce the best possible experience in website content management. The development team pursues excellence by following a well-defined, community-based process for developing new features, add-on products, plug-ins, and improvements. The architects, developers, and designers strive to produce a best in class CMS system that is easy to install, use, administrate and enhance. Don't settle for software that you don't love. Choose Plone and feel passionate about your content management system.

Plone has friends in high places

Plone is backed by a vibrant ecology of vendors and application service providers who can help you set up and maintain a Plone installation that meets your needs. From hosting a Plone instance for a small business to tailoring a deployment that ties into an e-commerce site's back end, you will have the freedom to choose your support.

Plone is supported by a non-profit foundation which provides a clear, neutral, and sustainable ownership of code, trademarks, and domain names. The Plone foundation also organizes conferences and coding sprints and is the official voice of the Plone community. The Plone foundation is also represented by the Software Freedom Law Center, which supports its development and promotion.
